Creating excitement and peace of mind for the people of the world
Management policy

1. Create excitement and peace of mind as a global manufacturer specializing in electronic and entertainment products.
2. Realize profitable growth by concentrating on strong business.
3. Be a company widely trusted by society.

Conduct guide

Every individual to take charge and strive for never-ending reform.

Evolving into a company capable of creating customer value

Making the most of its collective audio, video and wireless communications technologies, the JVCKENWOOD Group will evolve into a company capable of creating new value for customers in three business sectors.
Evolving into a company capable of creating new value for customers in three business sectors.

- **Automotive sector**
- **Public Service sector**
- **Media Service sector**
Passionate, Positive, Persistent

The JVCKENWOOD Group’s employees are actively engaged in businesses around the world. They work with pride and responsibility, and always stay passionate, positive and persistent as they build better relationships with customers around the world and become partners to deliver solutions.
Overview of the JVCKENWOOD Group

Sales Composition for FYE 3/’16

- Media Service sector: 23%
- Automotive sector: 47%
- Public Service sector: 28%
- Others: 2%

Major Business Areas
- Media Business, Entertainment Business
- Consumer Business, OEM Business

Production and Sales Structure

Production companies: 9 companies in Japan, 6 overseas companies
The overseas production ratio is 86% of the total

Overseas business operation companies: 20 companies
The overseas sales ratio is 65% of the total

Production Composition by Region (FYE 3/’16)

- Americas: 1%
- Europe: 9%
- Japan: 14%
- China: 26%
- Southeast Asia: 50%

Sales Composition by Region (FYE 3/’16)

- Asia & Others: 17%
- Europe: 20%
- Americas: 28%
- Japan: 35%

※Production companies, overseas business operation companies as of April 30, 2016.
※Production Composition by Region and Sales Composition by Region are based on FYE 3/’16.

*2 The numbers of employees decreased by 2,123 from the end of the previous fiscal year. This was due to employee reduction at an overseas subsidiary factory and other factors.
Creating value for our customers

Making the most of JVC and KENWOOD technologies and know-how to become a partner who creates new value while delivering outstanding solutions.

This fiscal year marks the second year of JVCKENWOOD Group's "Vision 2020" Medium- to Long-Term Business Plan, which was launched in May 2015. Under Vision 2020, we have chosen ROE as our principal management indicator; we have also implemented performance evaluation and business portfolio management by making ROIC an internal management indicator. As the result of these changes, we are now in a position to shift our management focus to our strengths and embark on the process that will see us evolve from a manufacturer/distributor into a company capable of creating customer value by providing solutions to issues confronting our customers.

To realize this vision, management of our business portfolio will be based on factors such as alignment with our long-term vision and capital profitability. We will divide our businesses into three categories: growth-leading businesses, profit-base businesses, and others, allocating management resources and conducting strategic M&A tailored to the characteristics of each business category. We intend to conduct growth investment in the growth-leading automotive sector, backed by stable income from the profit-base public service and media service sectors. As we transition our business structure to one that can achieve strong profit growth over the long term, the public service and media service sectors will function as the foundation and the automotive sector will generate approximately one-half of our profits.

◆ Fiscal Year Performance

For the fiscal year ended March 31, 2016, our sales and operating profits fell short of our initial expectations – an outcome that was due to factors including the sharp drop in oil prices, which led to a decline in sales of professional radio devices to the US rail industry, as well as the higher than anticipated advanced R&D costs to accommodate large new orders in the automotive sector (dealer option). That said, the global structural reforms implemented through the end of last year have been bearing fruit. Specifically, the conversion of our business from analog consumer electronics to digital solutions, the development of next-generation businesses, and M&A have allowed us to achieve an annual net profit for two consecutive years while simultaneously laying the foundation for future growth.

◆ Achieving Our Vision for 2020

The JVCKENWOOD Group will be managed via a matrix of five regions and three business sectors in accordance with the new management structure approved by the 8th Ordinary General Meeting of Shareholders. To ensure that management is agile, each business sector as well as each of the five regions will be led by a chief operating officer (COO) responsible for operations in their respective areas. Under this new management structure, we will continue to strive to grow our existing businesses while applying our collective audio, video and communications technologies and know-how to promising and socially significant sectors such as automotive and health care. We will boldly advance our new growth strategy and proactively work to anticipate customers’ issues, playing the role of a valuable partner offering cutting-edge solutions.
Earning the Trust of Society

We believe that a company seeking to achieve sustainable growth must first meet the expectations of its stakeholders and then, through unflagging efforts, earn the trust of society.

JVCKENWOOD Group endeavors to be a company that has earned the trust of its many stakeholder groups, including consumers and corporate clients. We will achieve this goal by working as a single, unified team and leveraging our strengths to improve the quality of all corporate activities, products and services; raise our competitiveness; and contribute to society. Simultaneous with these efforts, we will demonstrate our commitment to future generations by enhancing our community-based social contribution and environmental conservation activities.

Drawing on the experience of the Great East Japan Earthquake, we will further reinforce our crisis management system, as well as strengthen organization-wide initiatives for business continuity and measures to address significant risks to management.

We are confident that the complementary strengths of our respective technological assets and experiences will allow JVCKENWOOD to become a partner creating new value and expert solutions for our customers.

Thank you for your continued understanding and support.

June 2016

Takao Tsuji
President and CEO
“Vision 2020,” Medium- to Long-Term Business Plan

There have been structural changes in the external environment, such as the rapid depreciation of the yen, a shrinking consumer electronics market due to the widespread use of smartphones, and innovations in digital and optical technologies such as cloud computing and big data. In view of these, JVCKENWOOD launched a new medium- to long-term business plan, “Vision 2020,” focusing on fiscal year 2020 in May 2015, and is taking steps based on the Vision.

**Evolution into a company capable of creating customer value ~Long-Term Vision for 2020~**

**From a product vendor to a solutions provider**

JVCKENWOOD is to take a step forward and go from being a traditional manufacturer and sales company to being a company that creates customer value by providing solutions to their problems through focusing on the following initiatives.

JVCKENWOOD will change existing business operations oriented to product development under an operating unit system. Instead, it aims to become a partner for individual customers, an organization able to fully understand their problems, and provide specific solutions by employing business operations oriented to the markets and customers.

**New “shape of the company”**

Direct sales businesses are expanding based on dialogues between business units at the headquarters and customers in such businesses as the factory-installed equipment business in the Automotive sector and systems business for industrial wireless communication. In response to such a trend, JVCKENWOOD has restructured the business units at the headquarters into three organizations by customer industry sectors — the Automotive sector, which contains growth-leading businesses; and the Public Service and Media Service sectors, which are profit-base businesses. At the same time, it has also established the new “shape of the company.” In addition, the roles of individual regional CEOs* and sales companies have been broadened to be able to provide functions for product planning and marketing, and support for customer services in the direct sales businesses.

**From closed innovation to open innovation**

For prompt commercialization of the next-generation businesses currently under development, JVCKENWOOD will use its internal resources for intensive investments in areas such as digital cockpits and B-to-B broadband wireless, while closely cooperating with outside partners that include venture companies to accelerate development of a solutions-oriented model.

**Management Policy ~Toward management that focuses on areas of our strengths~**

Under “Vision 2020,” JVCKENWOOD is promoting its businesses, spotlighting fields where it can capitalize its strengths, by carrying out performance evaluations and business portfolio management using return on equity (ROE*1) as a major business indicator and return on invested capital (ROIC*2) as an internal management indicator.

*1 Return On Equity
*2 Return On Invested Capital
To achieve high ROE ~ Business portfolio ~

Business portfolio

JVCKENWOOD will promote management that no longer puts emphasis on business scale, such as expansion of sales or market share, but on areas where its strengths will resonate. Specifically, JVCKENWOOD will perform achievement evaluations and business portfolio management based on ROE as a publicized indicator as well as ROIC as an internal management indicator.

With regard to business portfolio management, JVCKENWOOD will allocate managerial resources and perform strategic M&As according to the characteristics of respective businesses, considering their consistency with the long term vision and capital profitability. By doing so, JVCKENWOOD aims to establish a business structure in which the stable income from the Public Service and Media Service sectors, the profit-base businesses, supports the investment for future growth of the Automotive sector, the growth-leading business.

Investment and financial strategy

Investment will be weighted in favor of the Automotive sector as a “growth-leading business.” Also an optimal capital structure will be pursued to improve capital profitability, keeping in mind the need for a balance between reducing net interest-bearing debt and investing in the growth-leading businesses. As a result, in the long-term, the Automotive sector will contribute approximately half of the profit, supported by the Public Service and Media Service sectors, thereby transforming into a business structure which will enable JVCKENWOOD to realize significant profit growth. For dividends, a target dividend payout ratio on a consolidated basis will be 30%, considering the balance between a stable shareholder return and the need to ensure investment funds for the growth-leading businesses.

Medium-term strategy toward fiscal year 2017 ~ Fundamental policies for each market and business ~

Market strategy

Looking toward fiscal year 2017, based on the abovementioned long-term vision and management policy, JVCKENWOOD will re-focus on developed countries and pursue an aggressive approach to growth in emerging economies. This is based on its recognition that there is still a lot of room to create customer value in both developed countries and emerging economies. At the same time, it will integrate its strengths in order to create new demand in next-generation business areas as a further step in the business strategy.

Business strategy

Aim to achieve this figure by turning businesses necessary to improve their profitability and commercializing next-generation businesses, supported by the profit-base businesses.

JVCKENWOOD considers the Automotive sector as one containing the growth-leading businesses and will work to expand market shares of consumer business and accelerate growth in the dealer-installed option business. Regarding the Public Service and Media Service sectors as profit-leading businesses, JVCKENWOOD will get involved in the total professional radio system business centering on professional digital radio equipment. In addition, JVCKENWOOD will make a full-scale entry into the pathology market in the healthcare area and the next-generation content creation (professional camera) and imaging device business, expand into the entertainment business for professional purposes, and thus diversify its profit-generation model. Regarding markets in developed countries, JVCKENWOOD will rebuild the industry structure as a solutions provider of the Automotive sector and develop potential demand in the Public Service and Media Service sectors. Regarding markets in emerging economies, JVCKENWOOD aims to break away from low-price competition and continue to develop markets in collaboration with customers, based on firm relationships with them that have been established in developed countries.

At the same time, JVCKENWOOD needs to manage businesses necessary to improve their profitability, such as the radio system business in the US, factory-installed equipment business, and imaging device business. It is also making an advance investment in the next-generation businesses, such as CAROPTRONICS systems, professional broadband radio system, and healthcare business. JVCKENWOOD aims to achieve the medium-term target by turning the businesses into profitability and commercializing the next-generation businesses.

Automotive Business

The dealer-installed option business continued to carry out activities to win orders backed by the favorable performance of “Saisoku” Navigation in the Consumer Business. It aims to secure a market share of 40% in the fiscal year ending March 2018.

[JVCKENWOOD | 11]
JVCKENWOOD showcased a show car equipped with a pre-mass production development model of the advanced Digital Cockpit System (McLaren 675LT luxury sports car in collaboration with McLaren Automotive of the U.K.) at the 2016 International CES held in Las Vegas, U.S., in January 2016. The show car enabled visitors to experience our critical technologies, such as the All-in-One Head-up Display that projects a conventional instrument cluster onto the windshield, digital rear-view mirror, and HD in-car camera, in an actual driver's seat.

In July 2013, we set up a Task Force for the commercialization of i-ADAS*2. Through this Task Force, JVCKENWOOD provides a consistent DiCI (Digital Cluster Information) system that processes incoming information for transmission to drivers. This type of system includes sensing devices, such as cameras and sensors, ECUs (electronics control units) that integrate and control the operation of sensing devices, and driver interfaces such as high-definition head-up displays (HUDs) that process information to drivers to improve driver safety and facilitate safe driving, e-mirrors and e-meters. JVCKENWOOD has positioned DiCI systems as its next-generation growth area and is making proposals to automakers and parts makers as well as conducting joint technical development in this area.

Showcased a show car equipped with advanced Digital Cockpit System at the world’s largest electronics show

JVCKENWOOD showcased a show car equipped with a pre-mass production development model of the advanced Digital Cockpit System (McLaren 675LT luxury sports car in collaboration with McLaren Automotive of the U.K.) at the 2016 International CES held in Las Vegas, U.S., in January 2016. The show car enabled visitors to experience our critical technologies, such as the All-in-One Head-up Display that projects a conventional instrument cluster onto the windshield, digital rear-view mirror, and HD in-car camera, in an actual driver's seat.

With the completion of the concept model of the Digital Cockpit System installed in the McLaren 675LT, commercialization of innovative driver assistance systems has come closer to reality through a combination of this concept model and JVCKENWOOD’s Infotainment Systems, including the car navigation systems for which JVCKENWOOD is famous around the world. We have currently entered a phase of verification testing that is conducted using this vehicle on road courses in cooperation with various automakers. With the spread of these innovative driver assistance systems among road vehicles, JVCKENWOOD aims to achieve a motorized society characterized by safety and peace of mind.

Market size of digital cockpit systems

The market for digital cockpit systems is forecast to grow to exceed 1 trillion yen in 2020. In this market, JVCKENWOOD will fully leverage its strengths as a specialized manufacturer that owns various core technologies and seek to further conduct development and early commercialization of such technologies to build its third pillar of products, following car audio and car navigation systems.
Creation of unconventional new business models

To evolve into a company creating customer value in the Professional Systems Business, JVCKENWOOD newly set up JVCKENWOOD Public & Industrial Systems Corporation (JKPI) on April 1, 2016.

To strengthen its Professional Systems Business, JVCKENWOOD has reorganized its Security Business (security systems such as monitoring cameras and storage devices), Professional Audio Business (audio systems such as broadcast audio equipment), and Business Solution Business (proposal, design, implementation, maintenance, and management of professional systems, which have been conducted by J&K Business Solutions Corporation, a group company). By setting up JKPI, JVCKENWOOD aims to conduct these business activities consistently as one-stop services.

Through this business reorganization, JKPI will be able to provide total solutions for the Professional Systems Business, ranging from the manufacture and sale of equipment to the proposal, design, implementation, maintenance, and management of systems, meeting a variety of customer needs more accurately, flexibly and promptly. JVCKENWOOD also aims to create unconventional new business models by promoting cooperation with other companies, such as multiple solutions offered based on the combined resources of JKPI and such other companies.

Provision of novel solutions using original technological assets

Epoch-making laboratory diagnosis technology using optical disk technology (DVD/Blu-ray)

Supported by the JST-SENTAN program, promoted by the Japan Science and Technology Agency (JST), JVCKENWOOD is pursuing equipment technology development enabling the detection and measurement of exosomes*3 useful for cancer screening. This is being done through the application of its original optical disk-related technology and research results*4 of Keio University School of Medicine, Tokyo Medical University, and School of Life Science and Technology of Tokyo Institute of Technology.

In March 2016, JVCKENWOOD agreed with Sysmex Corporation (hereinafter “Sysmex”), a manufacturer of diagnostic instruments and reagents, on the joint development of unconventional, unique, high-performance exosome diagnostic equipment based on a combination of the technological strengths and experience of both companies.

In this joint development, JVCKENWOOD develops equipment for detecting and measuring exosomes within the blood using its optical disk-related technology, and Sysmex develops equipment for measuring encapsulated substances of exosomes using its high-sensitivity measurement technology applicable to genes, proteins, and other substances.

After conducting clinical research, JVCKENWOOD aims to develop equipment enabling early detection of cancer by performing blood tests so that physical burdens can be reduced.

*3 An exosome is a vesicular granule (50–100 nm in size) secreted from many types of cells and exists in biological fluids such as blood, saliva and urine. An exosome contains a variety of substances such as protein, mRNA, and microRNA. In recent years, there have been increasing expectations that it will become a biomarker for various diseases, including cancer.

*4 Research results of Tokyo Medical University (Specially Appointed Professor Hiroshi Handa), Keio University School of Medicine (Full-time Lecturer Yasuaki Kabe), and School of Life Science and Technology of Tokyo Institute of Technology (Assistant Professor Satoshi Sakamoto).

Gazefinder, a social development evaluation device, equipped with gaze detection technology

JVCKENWOOD has been developing Gazefinder, a social development evaluation device, using gaze detection technology in collaboration with the Graduate School of Osaka University and United Graduate School of Child Development (Osaka University, Kanazawa University, Hamamatsu University School of Medicine, Chiba University and University of Fukui).

Gazefinder is a new solution that JVCKENWOOD has created using its imaging technology cultivated over many years. It consists of a stereo camera, monitor and exclusive imaging content and is able to quantitatively evaluate social development trends by detecting the point of gaze of the subject of an experiment who views a video. This technology can also be used to detect at an early stage developmental disorders such as autism spectrum disorder.

Not only aiming to commercialize Gazefinder, JVCKENWOOD is developing a system to comprehensively support people with developmental disorders.
Business Overview of the JVCKENWOOD Group

We create and deliver new value for customers

The Media Services sector consists of the Media Business covering imaging equipment, such as consumer/professional video cameras, the projector corresponding to the HDR (high dynamic range), headphones corresponding to high-resolution audio, and imaging devices, and the Entertainment Business including the Content Business, which has as its core Victor Entertainment, Corp. and the OEM business.

The Public Service sector consists of the Communications Systems Business covering Professional Wireless Systems, license-free transceivers and amateur radio sets, the Professional Systems Business including security camera systems and professional audio systems, the Healthcare Business which primarily provides medical display monitor solutions, and the Printer Business which provides ID card printers for high-precision color printing as an OEM supplier.
The Automotive sector centers on car navigation systems and car audio systems. In the Consumer Business, we provide products to customers through mass retailers and distributors. The OEM Business includes the Dealer-Installed Option Business, in which we provide products through car dealers, and the Factory-Installed Option Business, in which our products are installed in automobiles and distributed by automakers.
Automotive sector

Consumer Business

Overseas markets

In the consumer business, the JVCKENWOOD Group has gained an industry-leading market share both in car navigation systems and car audio systems especially in Europe and the U.S. by launching marketing and sales strategies that leverage the JVC and KENWOOD brands with different characteristics in overseas markets.

In 2016, JVCKENWOOD marks the 10th anniversary of its collaboration with Garmin, a U.S. corporation and the industry leader in the field of car navigation systems. By combining the strengths of both companies, we have long maintained the largest market share exceeding 50% in North America and will continue to strengthen our competitive advantages mainly in that market.

Japanese market

In Japan, where the focus of demand is on car navigation systems unlike in overseas markets, the JVCKENWOOD Group has successfully expanded both its sales volume and market share despite a declining market. This is owing to the popularity of the Saisoku-Navi series of car navigation systems developed by integrating the technologies of JVC and KENWOOD, for which the Group has released the first high-resolution audio model in the industry.

In addition, dashcams launched in 2014 have received a very high evaluation. We have developed them by fully leveraging our know-how accumulated through video camera development, realizing an industry-leading full HD high-quality video recording ability, and also loading driver assistance and other systems.

Future outlook

In the Japanese market, the JVCKENWOOD Group will continue working to expand sales and improve its cost competitiveness by further enhancing the product appeal of the Saisoku-Navi series and stepping up efforts for cost reduction. In addition, we will launch products that accommodate changes in market needs, such as dashcams and car-mounted cameras.

In overseas markets, where demand for car audio systems, our key products, is expected to continue declining gradually, we will work to enhance the lineup and expand sales of smartphone-compatible Apple CarPlay® products and the Android Auto™-enabled DVD Entertainment System. Furthermore, driven by strong domestic sales of dashcams, we will seek to enter the relevant overseas markets. In addition, expansion into emerging markets is being scheduled.
Automotive sector

Overseas markets

The demand for car audio systems, dashcams, and car-mounted cameras is increasing in overseas markets.

In the Japanese market, the JVCKENWOOD Group will continue to win new orders for large-lot projects from leading Japanese automobile manufacturers thanks to the high evaluation of their products. We will work to enhance the lineup and expand sales of key products, such as the Saisoku-Navi series of car navigation systems and dashcams.

In overseas markets, where demand for car audio systems, dashcams, and car-mounted cameras is increasing, the JVCKENWOOD Group will continue to work to enhance the product appeal of the Saisoku-Navi series and also loading driver assistance and other systems. The Group has released the first high-resolution audio model in the industry, leveraging its know-how accumulated through video camera development.

In addition, dashcams launched in 2014 have received a very high evaluation. We have developed them by fully leveraging our strengths of both companies, which have long maintained the largest leader in the field of car navigation systems.

Future outlook

In the dealer-installed option business, JVCKENWOOD will continue to win new orders for large-lot projects in the Japanese market by leveraging its track record in the consumer business and expand sales in overseas markets, centering on Asia. To deal with the increases in development costs incurred for new orders received, JVCKENWOOD will also focus more on cost reduction measures and strive to strengthen competitiveness and reduce costs by reviewing the development structure and building a common platform for operations, including the consumer business.

In the factory-installed equipment business, JVCKENWOOD will further focus efforts on the development of CAROPTRONICS devices (digital cockpit systems) that have the highest growth potential, such as car-mounted cameras, head-up displays, e-mirrors and e-meters (i.e., ADAS products). JVCKENWOOD is one of a few specialized manufacturers that have the various core technologies essential for the development of CAROPTRONICS devices within its Group, such as technologies related to car electronics, audio, image/optical and sensing. We will take full advantage of this merit and further promote the development of CAROPTRONICS devices to expand the factory-installed equipment business.
The Communications Systems Business, which boasts the world’s second-largest market share in its mainstay area of land mobile radio equipment, maintains high sales and strong profitability. To make it possible, JVCKENWOOD develops products that combine radio technologies, which it has cultivated over many years through amateur radio equipment, with cutting-edge digital and network technologies.

Having a high proportion of overseas sales as a feature, we deliver highly reliable professional radio devices and systems to the public safety sector (police and fire departments), the public service sector (electricity, water, and gas) and the private sector (railways, buses, hotels and plants) around the world. Going forward, JVCKENWOOD will particularly step up its efforts in the U.S. public safety market, which is expected to continuously expand, by setting up an Integrated System Business Division in Dallas through strengthened cooperation with Zetron, Inc. and EF Johnson Technologies, Inc., its local communication system subsidiaries. In addition, it will strive to develop integrated communications systems with the aim of providing total solutions in this area, centering on professional digital radio systems conforming to the NXDN standard and Project 25 (P25), a digital radio format for the public safety market in North America.

The Broadband Task Force, which was set up to focus on stepping up activities toward the development and commercialization of wireless broadband systems, is working to develop a next-generation IP radio system with the Push To Talk over Cellular (PoC) using the IP network of a mobile phone that allows for large capacity data communication. To strengthen the efforts to PoC, which is expected to be adopted rapidly in the whole world, JVCKENWOOD will aim to commercialize such business by launching products in the commercial market and eventually in the public safety market, which will require investment in infrastructure on a medium- to long-term basis.

The Professional Systems Business made a new start as JVC KENWOOD Public & Industrial Systems Corporation through a merger between JVCKENWOOD’s Professional Systems Business and the former J&K Business Solutions Corporation. The aim is to expand the solutions business. It is engaged in production and sales of highly reliable security camera systems and professional audio systems developed based on advanced image display and acoustic technologies to such markets as education, the public sector, distribution, social infrastructure and amusement facilities. In addition, JVCKENWOOD is stepping up efforts to expand sales by providing one-stop total solutions, such as the proposal and design of systems to solve customers’ issues, high-quality construction, and maintenance and operation services that ensure safe use over a long period.
JVCKENWOOD will strive to become a solutions provider that helps its customers to solve their issues while also contributing to the development of a safe, secure and comfortable society. In doing so, we will actively promote alliances with external organizations and offer a wide range of solutions based on outside-the-box ideas. These include an intelligence security system that enables IVA (Intelligent Video Analytics) of multiple security camera images in real time, as well as the KooNe Space Sound Design Solution that produces a comfortable space.

**Healthcare Business**

The Healthcare Business mainly handles mammography displays and other radiographic medical image displays that realize the highest levels of display performance and stability that medical imaging demands. This is achieved with JVCKENWOOD’s unique display technologies developed over the years. Also, we are promoting introduction of pathological image displays using our unique color management technology that can reproduce colors in high definition. JVCKENWOOD will strive to strengthen its medical image diagnosis solutions business via products such as accuracy control software that works with cloud computing, which realizes maintenance and management of luminance, an indispensable aspect of medical imaging displays for in-hospital image diagnosis systems. In addition to its current medical image diagnosis solutions, JVCKENWOOD will propose systems to provide various surgical support using high-definition 8K/4K cameras and monitors for endoscopes and operating microscopes.

Under the Medical System Development Task Force that will promote the expansion of the Healthcare Business, JVCKENWOOD will aim for business growth by developing advanced and innovative testing/diagnostic systems. These include GazeFinder, a piece of social development evaluation equipment that uses our proprietary gaze point sensing technology and that can identify developmental disorders at an early stage, and an early detection system for cancer to which our disk technology is applied.

**Printer Business (OEM)**

As an OEM supplier in the printer business, JVCKENWOOD is providing ID card printers for high-precision color printing to the printer manufacturers all over the world, by making maximum use of its mechatronics technology cultivated in VHS development in the past.

In this Business, starting from the color printer for prepress applications, we have developed plastic card-dedicated printers for business purposes for 20 years. We adopted an optimal re-transfer system for smart cards (IC cards), which are increasingly in demand and used for governmental ID cards, corporate employee ID cards, and other various purposes.

In response to a global demand for enhanced security, which is expected to increase in the future, JVCKENWOOD aims to further expand the business.
With the aim of enhancing the capacity to provide solutions, JVCKENWOOD has implemented an organizational change effective April 1, 2016. The organization has been realigned into departments by business models to promote the three areas of Solutions Business, Products Business, and Imaging Devices Business, from the conventional organization that was segmented vertically by product category.

**Solutions Business**

In the content creation area, we carry out development and sales of high-value-added products, including 4K/2K video cameras, high-definition monitors, professional Blu-ray recorders and industrial image systems that meet the needs of the professional sectors, such as broadcasting, video production, education and sports.

In the projector area, we are engaged in the development and sales of projectors based on our unique D-ILA LCOS (Liquid Crystal On Silicon) devices optimized with high contrast, such as full-fledged home projectors, high-resolution projectors for professional use such as flight simulators as well as projectors corresponding to the HDR (high dynamic range) that are used for automobile design.

Customer needs are rapidly changing, as an effect of the diversification of broadcasting and business forms due to the Internet of Things (IoT) and the advancement of high-quality video technologies such as 8K/4K imaging technologies. In order to respond to such needs flexibly, in addition to providing equipment, at JVCKENWOOD we are promoting a transformation to a solutions business that enables us to promptly respond to customer needs through systemization and customization.

**Products Business**

While the video camera market continues to contract on a global basis, our imaging area maintains a strong presence in the market owing to such efforts as promoting a shift to a proposal-based and high-value-added product lineup, including long playback models and all-weather models.

In the AV Accessory area, which handles products such as headphones, JVCKENWOOD will strive to improve its presence in the principal markets around the world by strengthening the lineup of high-value-added products, such as high-resolution audio models that leverage the Group’s unique advanced acoustic technologies, and special-purpose products, such as headphones for sports and kids, and by providing new products that meet a variety of needs.
Entertainment Business

The Content Business, which has as its core Victor Entertainment, Corp., is endeavoring to enhance its core Music Business in two ways. The first is by responding to changes in the entertainment industry environment, such as the diversification of user preferences and the popularization of the Internet and mobile phone distribution as a result of improved infrastructure. The second is by making enterprising investments in talented new artists to discover and foster such artists and promote a partnership strategy to create hits. Victor Entertainment is the second-oldest record company in Japan and has continued to deliver excitement to people through artists and music for over 85 years. Also, in anticipation of the popularization of the online music distribution market featuring high sound quality, we set up VICTOR STUDIO HD-Music, a high-resolution audio online music distribution site in February 2014. Further, we will aim to make an entry into new music distribution services, such as flat-rate services. In December 2012, JVCKENWOOD entered the Space Sound Production Business on a full-scale basis by launching its KooNe Space Sound Design Solution, which uses a high-resolution audio sound system. We have introduced the system to many locations, such as corporate offices, commercial and entertainment facilities, libraries and residential facilities.

Future Outlook

In order to shift our focus for growth onto the professional business from the consumer business as a profit-base business, we will accelerate the change from technology and product deployment for industrial use while also promoting transformation to the solution business by growing out of standalone sales.

Imaging Device Business

JVCKENWOOD is striving to expand its businesses in global markets by expanding external sales of its proprietary LCOS devices, achieving full-scale production of Pico devices, launching next-generation image devices such as HUD and releasing projectors compatible with 4K/2K and 8K/4K. In addition, we will aim to achieve full-scale deliveries in the imaging device business through cooperation with AltaSens, Inc., a subsidiary handling CMOS sensors.

Future Outlook

In order to shift our focus for growth onto the professional business from the consumer business as a profit-base business, we will accelerate the change from technology and product deployment for industrial use while also promoting transformation to the solution business by growing out of standalone sales.

Content Business

The Content Business, which has as its core Victor Entertainment, Corp., is endeavoring to enhance its core Music Business in two ways. The first is by responding to changes in the entertainment industry environment, such as the diversification of user preferences and the popularization of the Internet and mobile phone distribution as a result of improved infrastructure. We have introduced the system to many locations, such as corporate offices, commercial and entertainment facilities, libraries and residential facilities.

OEM Business

In the OEM Business that specializes mainly in the production of packaged software, such as CDs, DVDs and Blu-ray products, we fully support customers and meet their requests, from the production of content to the creation of package media. In 2016, we will relocate the Rinkan Business Center (Yamato City, Kanagawa Prefecture) of JVCKENWOOD Creative Media Corporation, a subsidiary engaged in the contract manufacturing of packages, to the Yokosuka Plant to enhance the corporate value of the entire Group. Going forward, we will aim at strengthening and improving the efficiency of marketing/sales activities by concentrating the Group’s capabilities.

Future Outlook

JVCKENWOOD will aim to make a transition to the total entertainment business, including the management business, live concert/event business and merchandising business, by connecting the appeal of artists and music to various businesses in a range of fields. In addition, we will enhance the comprehensive capabilities of the Group by expanding new B-to-B domains and making the most of our music, video technologies and know-how.
Diversity

Diversity & Inclusion

JVCKENWOOD positions diversity promotion as one of its important strategies and considers that it can generate innovative ideas and meet a variety of customer needs around the globe by making people with diverse backgrounds and opinions gather and inspire one another. For this purpose, in-house awareness programs, measures for promoting the recruitment and appointment of diverse personnel, and other activities have been implemented mainly by the Diversity Promotion Office.

Action Plan

To realize its “2020 Vision,” JVCKENWOOD has set up the following action plan to promote diversity. In Phase 1 (2015-2017), JVCKENWOOD aims to ensure diversity as a well-established corporate culture by offering awareness programs, conducting employee training, and such like on diversity promotion activities. As part of initiatives to promote women’s active participation, JVCKENWOOD also aims to boost the ratio of female managers to 5.0% by April 2020, and takes various relevant measures such as offering follow-up training and senior personnel training, and support for balancing work with child or nursing care.

Recruitment and Appointment of Diverse Personnel

To prevail in global societies that are changing constantly and significantly, we need to come up with new, unconventional ideas. From this point of view, JVCKENWOOD is conducting diversity-based recruitment activities disregarding gender differences, nationalities, physical disabilities, etc. In the case of new graduate recruitment, women have accounted for about 30% of new hires on average since the business integration. JVCKENWOOD hires some foreign employees every year. In addition, under the new management structure that started in June 2016, diversity-based personnel appointment has been promoted (e.g., two foreign employees and one female employee have been promoted to executive officers).
Becoming a bridge between Japan and Malaysia in future through manufacturing

I belong to the car navigation system design and development section and am currently in charge of designing and evaluating parts of car navigation systems.

As I am a Muslim, I have to fast for one month. However, during that period, my fellow workers care about my physical condition and health and help me out with my work. I am truly glad to be able to work for a company that understands other countries' cultures. I think JVCKENWOOD’s open office environment is also attractive to employees. The section I work for has also created a workplace with a positive atmosphere. Accordingly, we can express our ideas and opinions freely regardless of the length of the employment period or nationality. In addition, as everyone is working in an honest manner in such an environment, I can get to know people who have various new ideas and values. I am currently in the midst of learning technologies in Japan, but I hope I will be able to produce things that can make people around the world, as well as the people of Malaysia (my home country), happy. I also hope I will be able to contribute to the development of Malaysia in future.

Ahmad Azrie, Technology Group II, Engineering Department, Option Business Department, Automotive OEM Business Division

Overseas assignment in Canada where I was able to improve my business-oriented mindset

I belong to the overseas sales section of the Communications System Division and am in charge of sales and marketing support operations for overseas sales facilities. I have always wanted to get involved in international business since I was a student, and JVCKENWOOD’s global business operations have been attractive to me. As the section I work for has created a culture of cultivating global personnel by letting them gain experience in business overseas as early as possible, I think younger employees can have many good chances.

I had a chance to work overseas, and was assigned to the sales company in Canada for three and a half years from the seventh year of my employment. It was not easy to establish my position in a different country where people speak a different language, but it was a very important experience for me. I tried to fulfill my role to become aware of the circumstances in Japan and improve collaboration between the Japanese and Canadian offices. I also strove to get rid of barriers created by differences in business cultures and markets as early as possible and worked to gain the trust of local employees and customers so that I could contribute to local business development as a member of the sales company. Through these experiences in Canada, I was able to improve my mental strength. This is how my current confidence level has been built up. I will continuously challenge myself from a global viewpoint based on my past experiences.

Reiko Okano, Marketing & Sales Planning Group, Global Marketing Department, Business Management Department, Communications Systems Division

Aiming to build an organization allowing employees to play active roles in various environments

JVCKENWOOD’s Diversity Promotion Office is currently conducting its activities by focusing on empowering women. From a medium- to long-term perspective, however, we aim to build an organization that allows all employees to play active roles in various environments regardless of their gender. Through a variety of activities such as group-wide events and workshops, we will strive to create an environment and systems enabling all employees to deepen their understanding of diversity and put it into practice.

We will also strive to help employees achieve a better work–life balance and to expand our systems and support activities to enable them to juggle their jobs and housework (e.g., support for juggling jobs and child and nursing care).

Finally, our diversity promotion activities go beyond women’s active participation and include the recruitment of more foreign employees and the empowerment of people with disabilities.

Hitomi Kajitani, Head of Diversity Promotion Office, Corporate Management Division
Together with Employees

Our Company is making efforts to create workplaces that are safe and pleasant, and to provide each employee with support in their growth through education and training systems.

Supporting career and skill development

Our Company has systematized and implemented training to improve the skills employees need to perform their roles, and given them training so they can utilize those skills within the organization. We also implement a career development program to help employees realize their career vision that has been formed based on their backgrounds and experience.

The Career Development Program is comprised of the following: career interview; career design training; and career development support.

- **Career interview**
  Employees meet with their superiors once a year to discuss their career vision (what they want to be) and career development themes to integrate individual motivations and company expectations. This is the most fundamental part of the Career Development Program.
- **Career design training / Career development support**
  In these training sessions, employees review their current work practices while planning what they want to attain in the future (career vision). By considering the actions necessary to attain their goals, the employees gain an awareness of various points. Further, this is an opportunity for them to comprehensively consider the balance between their work and private life, such as the personal development needed to reach future goals and connections with family and the local community, while discussing their career visions. We have introduced a career development support system, which provides employees with assistance in terms of both time and money to take on further challenges by applying what they have learned from their new self-awareness.

Helping support harmony between work and family life

Our Company is steadily enhancing its efforts to support employees to have a good balance between their work and family life (work-life balance: WLB), with an aim to accept the diverse lifestyles and ways of working of employees.

- **Supporting childcare and nursing**
  We have established a variety of ways to support our employees both at work and at various occasions in their lives, for example in childcare and nursing. The coverage period applicable to the childcare-related support system is “until the first March 31 after the child reaches 12 years of age,” which is until the graduation from elementary school.

- **Reduction in overtime work**
  We have continuously been making efforts to reduce overtime work every day as a way to promote a good work–life balance (WLB).
  We are conducting activities to encourage our employees to work with an awareness of time under their own initiative. For example, each business center has designated one day a week as its own “no overtime day.” On this day, we urge employees to go home on time via an in-company broadcast two hours before the end of business hours, asking them to adjust their work schedules so they can go home at the end of the regular work hours.
  As a result of these activities, the total actual working hours has remained below 2,000 hours for four years in a row since FY2012, indicating that our efforts have borne fruit constantly.

- **Encouraging employees to take annual holidays**
  In addition to the activities to reduce overtime work, we are making efforts to encourage employees to use their annual paid holidays based on the targets for number of annual holidays to be taken, set between labor and management. As a result of such efforts, the total paid leave taken per year has increased from 13.9 days (rate of taking paid leave: 60%) in FY2010 to 17.06 days (rate of taking paid leave: 68%) in FY2015.

Promoting the health of employees

Health management

One of the critical factors for JVCKENWOOD to continue to grow into the future is to ensure that its employees stay healthy and motivated at work.

We consider the health of our employees as one of the most important management themes, and are promoting wellness through the collaborative efforts of management and the relevant divisions, such as the industrial health, human resources and general administration divisions as well as the Health Insurance Society.

JVCKENWOOD strives to create a workplace environment that enables its employees to stay healthy and motivated at work to achieve its corporate vision: “Creating excitement and peace of mind for the people of the world.”

Measures for mental health care

As mental healthcare measure, JVCKENWOOD will introduce a stress check-up system in FY2016. In this way, we will work to enhance the employees’ awareness about mental health and the need to prevent mental health disorders, and to improve the workplace environment.

We have also established a return-to-work support system for when employees go back to work after an absence due to mental health disorders. This system is designed to prevent relapses by introducing work responsibilities on a trial basis, increasing the workload and working time in stages, to allow people to go back to work without stress.

Measures to prevent overwork

JVCKENWOOD considers long working hours to be an important social problem that could lead to health problems and even death from overwork for employees.

We are striving to prevent damage to the health of people. We do this by having workers doing long hours of overtime receive face-to-face guidance and a medical interview by industrial physicians, while management personnel make efforts to reduce employees’ overtime working hours. Further, we have been proactively working to reduce long working hours by taking measures, such as establishing days when people leave work on time and promoting the use of annual paid leave.

Safety and Health Committee

We have established a safety and health management system in accordance with the Industrial Safety and Health Act, and we have the Safety and Health Committee in place at workplaces with 50 or more employees.

The Safety and Health Committee consists of a chairman and committee members, comprising employee and management representatives in equal numbers, and is held once a month. The committee is working to improve the workplace environment by conducting reviews of industrial accidents that have occurred and the actual conditions of overwork and mental health problems, based on reports of survey results issued by the Secretariat.
Environmental Initiatives

About Our Environmental Activities

Environmental Policies

To preserve the global environment and resources and prevent pollution, we will manage our business activities, our product development, and our services by making ongoing improvements with a full awareness of our environmental impact.

1. Prevent global warming by promoting the reduction of CO₂ emissions throughout the product lifecycle, including our business activities, by developing technologies and products that reduce environmental impact.

2. Use the limited global resources effectively to create a sustainable society by reducing the resources we use within a framework of 3R activities and progressively using eco-friendly materials.

3. Manage chemicals that affect the world’s environment and biosphere, continue to reduce their consumption, and switch to eco-safe materials.

4. Recognize the effect on biodiversity of all business activities, product development and services and comprehensively reduce our environmental impact in harmony with the natural environment.

5. Comply with environmental legislation and other requirements with which we agree.

6. Educate employees on the environment to cultivate greater environmental awareness.

Visiting environmental lecture program

JVCKENWOOD has been providing a visiting environmental lecture by using its Forest Notes, an Internet service that with the aid of a wooden wireless active speaker transmits sounds of the forest in real time, at Sugekari Elementary School in Meguro-ku, Tokyo, every year since 2012.

At the lecture conducted in 2015, we listened to the local live forest sounds, while watching videos taken at Morotsuka Village in Miyazaki Prefecture, Hida-Takayama in Gifu Prefecture, Umaji Village in Kochi Prefecture, Shirakami-Sanchi in Aomori Prefecture, and a reservoir area in Yamanashi Prefecture, and learned the importance of forests. After receiving a short lecture on onomatopoeia, students expressed the sounds of forests they heard through Forest Notes with letters by using the technique of onomatopoeia and tried sharing their feelings with others.
In collaboration with Mori Trust Hotels & Resorts Co., Ltd., JVCKENWOOD has held a free-form research project and handcraft workshop for children in summer every year since 2013 at Laforet Shuzenji in Izu City, Shizuoka Prefecture.

This year, the participating children listened to forest sounds through Forest Notes to help them form images. Then they moved to Laforet Forest and drew pictures and made art frames by using nuts, twigs and other materials in the forest, which softens the sunlight and keeps the air cool. Through this workshop, children learn from the forest and feel excitement as well as a sense of achievement from making items by hand.

In support of the Yokohama Ecology School Project, held in the Minato Mirai area in Yokohama and sponsored by Yokohama Environmental Planning Bureau, JVCKENWOOD conducted a workshop providing a visiting ecological lecture by using twigs and acorns.

It was our third time to participate in this program since 2012, and it was part of our cooperative activities under the comprehensive regional vitalization partnership agreement concluded with Yokohama City in August 2014.

While listening to forest sounds through Forest Notes, participants created their own original and unique craftwork by using twigs, acorns and Japanese cypress nuts collected by JVCKENWOOD’s employees and beads and other commercially available decorative parts.

Making an art frame in a forest-like environment

In collaboration with Mori Trust Hotels & Resorts Co., Ltd., JVCKENWOOD has held a free-form research project and handcraft workshop for children in summer every year since 2013 at Laforet Shuzenji in Izu City, Shizuoka Prefecture.

This year, the participating children listened to forest sounds through Forest Notes to help them form images. Then they moved to Laforet Forest and drew pictures and made art frames by using nuts, twigs and other materials in the forest, which softens the sunlight and keeps the air cool. Through this workshop, children learn from the forest and feel excitement as well as a sense of achievement from making items by hand.
Green procurement

JVCKENWOOD creates its products using various materials and believes that substances that may have adverse effects on the Earth and people must not be used for products sold to customers. In addition, we carefully consider what will happen to products that are disposed of after becoming obsolete.

The JVCKENWOOD Group places importance on equality and balance from a global point of view, according to the laws and ethics of society. And it is working with many parts procurement partners and sales partners in the supply chain to build mutually beneficial relationships through shared trust and transparency in accordance with laws, regulations and social norms.

We have increasingly been procuring parts from overseas parts procurement partners, and are pursuing green procurement in cooperation with companies in the supply chain. Through this activity, JVCKENWOOD can receive reports on substances, including the volumes contained in each product, and check whether these substances may have adverse effects.

Since the parts that make up products are provided by suppliers, JVCKENWOOD checks their parts production processes, conducting activities to protect the Earth and people in cooperation with its suppliers.

▼ For the green procurement guidelines, please visit our website.

Information disclosure initiatives related to mineral production in conflict areas

In the Democratic Republic of the Congo and neighboring countries, antigovernment forces have been involved in sales of minerals (conflict minerals) mined by brutal and inhuman means to fund their activities in recent years. This problem was pointed out by the United Nations and has become a serious social issue in the supply chain.

The United Nations is also concerned about this problem as it has further led to a vicious cycle in other areas, and the United States has become the first country in the world to enact new rules on mineral purchases from conflict areas.

JVCKENWOOD is not directly subject to these rules, but agrees to their concept as a company promoting CSR procurement in the global supply chain. Based on the corporate policy of not using product parts containing tin, tantalum, tungsten or gold unjustly produced and refined in the Democratic Republic of the Congo and neighboring countries, which are defined as conflict minerals, JVCKENWOOD continues to establish a solid supply chain and promote responsible mineral procurement activities.

In addition, at JVCKENWOOD we participate in the inquiry briefings of the Responsible Minerals Trade Working Group of the Japan Electronics and Information Technology Industries Association (JEITA) as an explainer, and carry out due diligence by using the CFSI Reporting Template (CMRT) developed by Conflict-Free Sourcing Initiatives (CFSI) to gather information from our parts procurement partners on whether their products contain conflict minerals.
JVCKENWOOD will enhance mutual communication with various stakeholders to achieve sustainable growth

JVCKENWOOD considers that the achievement of sustainable growth and the fulfilment of social responsibility are closely connected. Accordingly, we promote sound business activities by strengthening risk management and compliance, while improving corporate value by addressing social and environmental issues (through CSR activities). To this end, we will endeavor to operate business by leveraging our strengths and communicate information, with the constant awareness of challenges to be addressed, by listening to the opinions of all our stakeholders, including customers, employees, business partners, local society and shareholders/investors.

**Customers**
- In order to provide safety and peace of mind to customers, the JVCKENWOOD Group established its basic policy on product safety and conducts product development and safety management based on this policy.
- We have posted Using Products Safely on our website. This information is easy to understand and explains how customers can use our products safely and with confidence.
- Every day we sort out, categorize and analyze the customer feedback sent to our customer support center and work to provide products and services that match our customers’ needs, can gain their trust and from which they can derive satisfaction.

**Shareholders/Investors**
- JVCKENWOOD has a separate page for investor relations information on the company website and makes timely and detailed disclosure of information.
- At general meetings of shareholders, we have discussions with our shareholders to reflect their intentions in corporate management and provide explanations on the direction of corporate management to promote their understanding. Further we hold dialogues with our shareholders on a daily basis over the telephone and via letters.
- We conduct IR activities proactively, both domestically and internationally, to meet with our investors directly and help them have a deep understanding about JVCKENWOOD.

**Employees**
- We share the actual conditions of management and recent efforts of the company with employees through management meetings that are held regularly.
- We promote improvement of mutual internal communication by utilizing an in-house web-based newsletter to report on the activities of top management and introduce employees’ active involvement in activities related to their work and their personal lives, and post the employees’ responses.
- We have established the JVCKENWOOD Group Compliance Activity Standards and Internal Whistleblower Regulations to create an open workplace environment.

**Society**
- We conduct volunteer cleaning activities in the areas surrounding our business centers to keep harmonious relationships with people living in the local communities.
- We participate in events carried out by the City of Yokohama where the Head Office is located to help promote regional culture.
- We are contributing to the development of the electronics industry by developing proper and smooth relationships with the relevant ministries and agencies as well as industry associations through public relations activities.

**Business partners**
- We are maintaining smooth business relationships with procurement partners for parts, materials and finished products by conducting supplier meetings and individual business negotiations and checking annual evaluations by customers.
- By conducting constant improvement activities, including audit activities, we will achieve proper quality and delivery periods, as well as costs, in an effort to continue with business transactions that are beneficial for both business partners and JVCKENWOOD.
Corporate Governance

1. The Board of Directors and Directors
The Board of Directors, regarded as an organization that makes fundamental and strategic decisions while overseeing business execution, holds regular meetings once a month and extraordinary meetings when necessary to deliberate and decide on basic management policies and important matters as well as monitor and oversee the status of business execution. Directors’ terms of office are one year in order to make their responsibilities clear and to make management decision-making processes quicker. In addition, we proactively recruit external directors in order to increase the transparency of decision-making and lead innovation and governance.

To ensure the effectiveness of the management supervisory function based on experience, achievements, professional viewpoints, insights, and other attributes, as well as independence having no potential conflicts of interest with general shareholders, JVCKENWOOD elects candidates for external directors, in principle, by taking such procedures as confirming their business backgrounds (i.e., confirming they have not been major shareholders of JVCKENWOOD or engaged in the execution of operations of any of JVCKENWOOD’s main business partners) based on its independence standards and policies.

JVCKENWOOD has nine directors (of which three are external directors), who were appointed at the 8th Ordinary General Meeting of Shareholders held on June 24, 2016.

JVCKENWOOD also established the Nomination and Remuneration Advisory Committee, for which all of its three external directors serve as committee members, effective December 1, 2015. The Nomination and Remuneration Advisory Committee has since proposed JVCKENWOOD Representative Director candidates to the Board of Directors, reviewed the appropriateness of director candidates and proposed directors’ compensation plans. The Board of Directors has determined director candidates and directors’ compensation, taking into consideration the opinions stated by the Nomination and Remuneration Advisory Committee.

Since the meeting of the Board of Directors held following the Ordinary General Meeting of Shareholders on June 24, 2016, Yasuyuki Abe, who serves as independent external director independent from and neutral to management of the Company, has been serving as the Chairman of the Board of Directors.

2. Executive Officer System
JVCKENWOOD has adopted an executive officer system, differentiating its business execution function to clarify management responsibility and business execution responsibility. Since June 24, 2016, fifteen executive officers (five concurrently holding positions as directors) have been performing their duties.

The Board of Directors, chaired by an external director, makes decisions through discussions between external directors as independent directors and directors serving concurrently as executive officers, and delegates authority for business execution to executive officers. In addition, the President and the Representative Director of the Board serves as the Chief Executive Officer (CEO) and is responsible for both management supervision and business execution. According to the decisions at meetings of the Board of Directors, the CEO chairs the Board of Executive Officers’ meetings, and each executive officer executes business operations with responsibility.

JVCKENWOOD, effective June 24, 2016, established the position of General Manager or Representative for executives who assume the responsibility for the overall operation of all the businesses in the Americas, EMEA (Europe, Middle East and Africa), Asia Oceania, and China, as well as the position of sector Chief Operating Officer (COO) in the Automotive sector, Public Service sector and Media Service sector. In addition, we established the positions of Chief Financial Officer (CFO), Chief Strategy Officer (CSO), Chief Technology Officer (CTO), and Chief Administration Officer (CAO) for officers who oversee corporate divisions, and appointed executive officers to those positions. In this way, we have shifted to a new execution system under which the appointed executive officers support the CEO, towards the achievement of Vision 2020, the Medium- to Long-Term Business Plan released in May 2015.

Corporate Organizations
3. Audit & Supervisory Board and Audit & Supervisory Board Members

JVCKENWOOD is a company with an Audit & Supervisory Board. Audit & Supervisory Board Members are responsible for the corporate audit function and their duties include attending Board of Directors’ meetings and other important meetings, as well as holding Audit & Supervisory Board meetings, and auditing the execution of Directors’ duties, business execution of the entire Group, and corporate accounting.

Since June 24, 2016, three Audit & Supervisory Board Members (including two external audit & supervisory board members) have been performing their roles and responsibilities.

JVCKENWOOD works to ensure the effectiveness of the management supervisory function based on experience, achievements, professional viewpoints, insights, and other attributes, as well as independence with no potential conflicts of interest with general shareholders. To this end, it nominates candidates for external audit & supervisory board members in principle after confirming the business backgrounds (i.e., confirming they have not been major shareholders of JVCKENWOOD or engaged in the execution of operations of any of JVCKENWOOD’s main business partners) based on its independence standards and policies, with the approval of the Audit & Supervisory Board.

【Organization System】

As of June 24, 2016

Note* EMEA: Europe the Middle East and Africa
Internal Audits, Audits by Audit & Supervisory Board Members and Accounting Audit Systems

At JVCKENWOOD, the Corporate Audit Office conducts internal audits on the overall business execution of the entire Group and reports the audit results to the Board of Directors that serves as an oversight organization. The Corporate Audit Office consists of four staff members engaged in operational audits and internal control audits.

Audit & Supervisory Board Members implement audits according to the audit schedule, audit the entire Group’s operations, and check in-house approval documents based on the monitoring of directors and executive officers. Audit & Supervisory Board Members also accompany audits performed by the Corporate Audit Office, thereby broadening the scope of audits by Audit & Supervisory Board Members.

During the fiscal year ended March 2016, accounting audits of JVCKENWOOD and the Group were performed by certified public accountants who are limited liability partners and managing partners of Deloitte Touche Tohmatsu Limited.

All the Audit & Supervisory Board Members including external audit & supervisory board members perform management audits by themselves, attend Board of Directors’ meetings, obtain the results of internal audits performed by the Corporate Audit Office in relation to the Group’s overall business operations, and exchange and confirm relevant information by holding meetings with the Corporate Audit Office whenever necessary. If there is any sign of fraud, etc. committed by management, there is a reporting route in place requiring the Corporate Audit Office to report it to Audit & Supervisory Members.

At the Audit & Supervisory Board meeting, the results of accounting audits performed by independent accounting auditors are regularly reported to Audit & Supervisory Board Members. As a result, the validity of mutual coordination between audits has been improved.

JVCKENWOOD has established its internal audit system so that it can strengthen monitoring functions by performing audits for each compliance theme in collaboration with the Compliance Committee, and by other means.

Internal Control

JVCKENWOOD set up the Internal Governance Office developing “systems necessary to ensure the properness of operations of a Stock Company” through promoting activities of internal control systems.

The Internal Governance Office promotes the development of an internal control environment by carrying out the operations shown to the right.

- Operations for proper development and operation of internal control systems
- Operations for enforcing and ensuring compliance
- Internal control operations over financial reporting (operations to ensure J-SOX compliance)
- Operations for preventing/curbing fraudulent accounting practices
Key Philosophy and Activities

The JVCKENWOOD Group regards risks as “factors that are mutually linked, affecting one another to inhibit the achievement of business plans.” The Group regularly identifies risks faced by all its business sites around the world in order to recognize them clearly. Also, the Group’s business sites around the world identify issues to tackle in order to prevent the realization of the identified risks and minimize their impact or damage. They conduct activities to resolve these issues systematically by exercising ingenuity. In the meantime, some of the identified risks could affect the entire Company and thus require problem-solving activities from a company-wide perspective. Management takes the initiative in implementing measures to resolve such problems. We consider that the most effective corporate response to risks is to identify them correctly in the course of our day-to-day corporate activities, understand the problems in reducing risks, and have all our business sites around the world collaborate with management to resolve those problems.

Risk Management System

JVCKENWOOD implements the risk surveillance process shown in the diagram below at all its business sites around the world every year. The purpose is to ensure the risk management activities are conducted through collaboration between its business sites and management. In the risk surveillance process implemented throughout the year, we quantitatively assess the significance of risks identified by the business sites, examine problems in reducing risks of high significance, and work on resolving those problems and confirm the effect. The Enterprise Risk Management Conference, which is comprised of members chosen from company executives and chaired by the Chief Administration Officer (CAO), keeps track of the progress and results of such activities. If risks that need to be addressed on a company-wide scale and from a company-wide perspective are identified, company executives in charge selected from among the members of the Enterprise Risk Management Conference prepare resources and a mechanism for solving problems and provide support for activities at business sites systematically. The progress and results of such activities are shared at the Enterprise Risk Management Conference, and the CAO evaluates the performance and gives appropriate directions. The Enterprise Risk Management Conference also develops risk management regulations to enable the framework of risk management activities to function effectively and holds various deliberations for risk management.

Enterprise Risk Management Activities

Business Continuity Management (BCM)

Facing various risks, in particular emergency situations including natural disasters, epidemics, and terrorism represented by Islamic State expanding globally, the JVCKENWOOD Group recognizes that its first social responsibility to stakeholders including customers is to put the utmost priority on preserving human life, and its second is to deliver products and services. To fulfill these responsibilities, the Group has defined the basic principle of the Business Continuity Plan (BCP) as “contributing to social security and safety through continuing business by swiftly reinitiating business operations after the occurrence of an emergency situation.” Based on this policy, and beginning with the development of systems for confirming the safety of employees and their families, disaster prevention, and emergency stockpiles, the JVCKENWOOD Group has been conducting BCP activities at all its business divisions relevant to its value chain, from production bases, design and development bases, the Corporate Division of the Head Office, and sales bases to affiliates. It has done so by leveraging its accumulated BCP expertise to build in stages a mechanism of alternative production in preparation for events in which it would be difficult to restore its production bases in a short period of time. The Group also carries out various types of simulation training to gain experience in initial responses, while improving rules and manuals based on the results and findings of such training, aiming to enhance the quality of BCM.
Global Brand Strategy

Global branding campaign through motorsport

Motorsport is on the cutting-edge of technology and is regarded as a dramatic event requiring racing teams to push their limits in intense competition.

Sharing a commitment to create excitement for millions through the use of technologies, JVCKENWOOD conducts sponsorship activities for motorsport to boost its brand exposure and visibility based on its corporate vision of “creating excitement and peace of mind for the people of the world.”

WTCC (FIA World Touring Car Championship)

WTCC, which started in 2005, is the world’s top championship for touring cars (remodeled stock cars) organized by the FIA (Fédération Internationale de l’Automobile). Its predecessor was the ETCC (Europe Touring Car Championship). Together with the FIA Formula One Championship (F1), FIA World Rally Championship (WRC) and FIA World Endurance Championship (WEC), WTCC is one of the four major world championships that can truly claim the title “World Championship.”

JVCKENWOOD started to partner the WTCC in 2009 and stepped up its commitment in 2013 to become an Official Series Partner of the WTCC in all racing series throughout the year.

WTCC is a championship which tours the world and matches the business activities of JVCKENWOOD, which are also expanding globally. In addition, since WTCC is based on remodeled stock cars, it parallels JVCKENWOOD, which is strengthening its operations in areas centering on the car electronics businesses, including land mobile radio equipment and professional cameras. In addition, WTCC events are broadcast in 188 countries around the world, leading to a strong media impact. Hence this sponsorship is expected to contribute significantly to JVCKENWOOD’s branding and business expansion.

Official Supplier of McLaren Honda-F1 Team

Having signed an official supplier contract with McLaren in 1991, KENWOOD has been supplying wireless radio communication systems and providing extensive technical support through its professional staff. The partnership is the longest McLaren has had with a Japanese company.

The partnership between KENWOOD and the McLaren-Honda F1 Team is the relation of colleagues fighting together for victory in the battlefields of a Grand Prix, going beyond the relationship of racing team and sponsor.

October 2016 will mark the 25th anniversary since KENWOOD started supplying wireless radio communication systems to the McLaren-Honda F1 Team.

Super GT

Super GT is Japan’s premier international series of motor racing for touring cars (remodeled stock cars) authorized by the FIA (Fédération Internationale de l’Automobile). With major Japanese automobile manufacturers competing proactively in this championship, Super GT features a mixed-class racing competition combining GT500 and GT300 classes, a rare style of racing, allowing fans to enjoy intense racing with frequent overtaking.

JVCKENWOOD has been supporting GT-Association, the organizer of the racing series, and supplies official on-board cameras for television broadcasting in 22 racing cars, including all GT 500 class cars.

Contracted Racing Drivers/Team Director (KENWOOD)

KENWOOD has appointed popular racing drivers and a team director who are top-level players in Super GT, Japan’s premier motorsports racing, as its brand ambassadors.

Juichi Wakisaka, Team Director
LEXUS TEAM LE MANS WAKO’S #6
Juichi Wakisaka is a high-profile PR ambassador of Super GT who retired from driving after conclusion of 2015 Super GT Series season and assumed the Team Director position from 2016 season.

Masataka Yanagida, Racing Driver
KONDO RACING #24
The Super GT Series Champion in 2011 and 2012

Takuya Izawa, Racing Driver
RAYBRIG TEAM KUNIMITSU #100
A talented ace driver who is gaining in popularity while also improving his driving technique.
Corporate History

JVCKENWOOD Corporation

2007
July Victor Company of Japan, Limited (JVC) and Kenwood Corporation (Kenwood) entered into an agreement on a capital and business alliance to cooperate in their Car Electronics and Home Audio Businesses and integrate their management.

Aug. JVC increased its capital through a third-party allocation of new shares of a total of 35 billion yen to Kenwood and multiple investment funds managed by SPARX International (Hong Kong), Ltd.

Oct. JVC and Kenwood established the technology development joint venture J&K Technologies Corp. (J&K Technologies)

2008
May JVC and Kenwood signed an agreement to integrate their management through the establishment of a joint holding company (stock transfer)

Oct. JVC and Kenwood established the joint holding company JVC KENWOOD Holdings, Inc. (JVCKENWOOD) through a stock transfer (JVCKENWOOD's shares were listed on the First Section of the Tokyo Stock Exchange)

Oct. Development and production functions of the Car Electronics Business of JVC and Kenwood were taken over by J&K Technologies through a company split (simplified absorption-type split)

2009

Dec. Launched the MDV-313, the first car navigation system for which the same JVC and Kenwood platform was adopted (Photo ①)

2010
Mar. Implemented adjustments to earnings results of JVC for the period between the fiscal year ended March 31, 2005 and the second quarter of the fiscal year ended March 31, 2010 (including consolidated financial statements as a consolidated subsidiary of JVCKENWOOD), and to those of JVCKENWOOD for the period from its establishment on October 1, 2008 to the second quarter of the fiscal year ended March 31, 2010

Dec. Undertook steps to relocate the Company's head office and realign business divisions to promote Group management integration, enhance operating efficiency and maximize integration effects

2011
Aug. JVC KENWOOD Holdings, Inc. changed its name to JVCKENWOOD Corporation

2012
Apr. Acquired a total of 45.0% of the outstanding shares of Shinwa International Holdings Limited, a large-scale Hong Kong-based manufacturer and seller of CD/DVD mechanisms for car AV equipment (in-car CD/DVD mechanisms), making it into an equity-method company

June Distributed dividends (Y5/share) for the first time since established JVCKENWOOD

Nov. Formulated a new “Medium-Term Business Plan,” which covered the period through to the fiscal year ended March 31, 2016

2013
Mar. Launched DLA-VS4800, the world’s first mass-production model of the professional-use D-ILA projector, which features an 8K high-definition display

June Converted Shinwa International Holdings Limited into a consolidated subsidiary

July Took over all of the shares of TOTOKU Nagaoka Corporation through an absorption-type corporate split from TOTOKU Electric Co., Ltd., and changed the corporate name from TOTOKU Nagaoka to JVCKENWOOD Nagaoka Corporation

2014
Jan. Invested in WIL FUND I, L.P. to accelerate growth strategy partnership with domestic and international venture companies

Mar. Obtained 100% ownership of EF Johnson Technologies, Inc., a company focused on delivering mission-critical, digital P25 communications solutions to the North American market

Sept. The JVCKENWOOD Group launched NX-5000 series, NEXEDGE series of multi-mode digital radio systems that complied with the P25 standard (Photo ②)

2015
Mar. Launched GY-LS300CH, professional 4K memory card camera recorder (Photo ③)

Apr. Converted ASK Industries S.p.A., the European In-vehicle Component Company, into a consolidated subsidiary

May Reviewed the medium-term business plan announced in fiscal 2012 and formulated Vision 2020, the new medium- to Long-Term Business Plan that looks ahead to fiscal 2020

2016
Apr. Established JVCKENWOOD Public & Industrial Systems Corporation, aiming to expand the Professional Systems Business
